

Thousands still to order a better broadband service after CSW Project upgrades

Thousands of households and businesses across the CSW region may be missing out on the better broadband connectivity we have provided because they haven't yet ordered an improved service.

Fast and reliable digital connectivity is no longer seen as a luxury but a necessity given its increasing importance to nearly everything we do in modern day life. For example, with a better broadband connection, you can:

- Browse the web faster and carry out online tasks such as shopping and internet banking more easily
- Stream HD films, TV and video services without delay
- Chat face-to-face with friends and family – wherever they are in the world
- Run multiple devices at the same time without your connection slowing down
- Work and study from home more easily
- Engage with services that are increasingly moving online
- Compete more effectively with other businesses in an increasingly competitive global market place.

We realise that some of you who want to order an improved service can't at this moment in time because your connection hasn't yet been upgraded.

However, the more households and businesses who have been upgraded that we can get to order an improved service, the more money that comes back into the project, meaning that we can then look into providing solutions for those still waiting for better connectivity.

To find out if you can order an improved service, enter your landline number or address into the [BT Broadband Availability Checker](#). Our [How to use the BT Broadband Availability Checker](#) webpage will help you make sense of the Broadband Checker results.

Broadband comparison sites such as [MoneySavingExpert.com](#), [Broadband Choices](#), [Compare the Market](#), [BroadbandProviders](#) or [uSwitch](#) can help you find a broadband package to suit your needs.
